

CorsixTH

ATTENTION: A legitimate copy of the game is required to play!

CorsixTH aims to re-implement the game engine of Theme Hospital with support for modern operating systems and several bug fixes and quality of life improvements to the game.

```
yay -S corsix-th innoextract
```

If you have the original retail CD version, copy the `HOSP` folder to your hard drive. Upon first start, CorsixTH will prompt you to point it to the data file directory

If you have the [GOG version](#), go to your library, hover over the Theme Hospital entry, click the arrow that appears and choose `Download offline backup game installers`. Extract the installer with `innoextract`:

```
innoextract setup_theme_hospital_v3_\(28027\)\.exe \  
-d ~/Games/HOSP \  
-I ANIMS \  
-I DATA \  
-I DATAM \  
-I DATA
```

```
-I INTRO \
-I LEVELS \
-I QDATA \
-I QDATAM \
-I SOUND \
-I CONNECT.BAT \
-I DOS4GW.EXE \
-I HOSPITAL.CFG \
-I HOSPITAL.EXE \
-I manual.pdf \
-I MODEM.INI \
-I NETPLAY.TXT \
-I README.TXT \
```

This will extract only necessary files (excluding the extra GOG files) to `~/Games/HOSP`. Either point the game to this path or move it to somewhere else that's more to your liking.

For more detailed instructions see the [CorsixTH Github Wiki](#).

Music

CorsixTH allows for external high quality music files to play instead of the MIDI soundtrack.

There is a remixed version of the Theme Hospital soundtrack on YouTube by *Krytie2X4B* with a link to the [soundtrack in OGG format](#) on Dropbox.

Extract the files to a location of your choosing and point the game to it from the in-game settings.

Revision #4
