DBus

`dbus-broker` is a drop-in replacement for the *libdbus* reference implementation, which aims "to provide high performance and reliability, while keeping compatibility to the D-Bus reference implementation".

Install `dbus-broker`:

```
pacman -S dbus-broker
```

Disable `dbus.service` and enable `dbus-broker.service` globally:

```
systemctl disable dbus
systemctl enable dbus-broker
```

Reboot for the changes to take effect.
